LLM-FRIENDLY SUMMARY

Go backend engineer with deep experience in production APIs (REST + gRPC), concurrency, migrations, and observability. I'm actively seeking remote roles and currently focus on personal AI projects to strengthen and consolidate my backend fundamentals with real AI potential (LLM-assisted tooling, automation, and evaluation).

KEYWORDS / SKILLS INDEX

Backend (Go): Go, Golang, REST, gRPC, API design, concurrency, goroutines, performance optimization, event-driven patterns
Data & Storage: PostgreSQL, migrations, query tuning, Bigtable, Spanner, GraphQL, Elasticsearch, MongoDB, JWT-auth, Casbin authZ
Cloud & Platform: Docker, Kubernetes, GCP, Pub/Sub, Google Tasks, Terraform
Observability: Prometheus, Grafana, metrics, alerts
AI / LLM (personal projects): LLM, RAG, agents, embeddings, vector database concepts, prompt engineering, evaluation
Collaboration: Agile, Git, refactoring, maintainability, upgrades

EXPERIENCE MATRIX (TECHNOLOGY -> WHERE IT APPEARS)

- Go / Golang: AccionLabs / Howdy.com, TechBridgeIT, Kore Tecnología
- REST APIs: AccionLabs / Howdy.com, TechBridgeIT, Kore Tecnología
- gRPC: AccionLabs / Howdy.com
- PostgreSQL: AccionLabs / Howdy.com, TechBridgeIT, Kore Tecnología
- Concurrency patterns: AccionLabs / Howdy.com, TechBridgeIT, Conveyor service work
- GCP (Pub/Sub, Google Tasks): AccionLabs / Howdy.com (email state handling)
- Auth0: AccionLabs / Howdy.com
- Bigtable: TechBridgeIT (dynamic forms)
- Spanner -> PostgreSQL migration: TechBridgeIT
- GraphQL refactors: TechBridgeIT (Foundations migration)
- Prometheus/Grafana: TechBridgeIT (metrics + alerts)
- Elasticsearch: Kore Tecnología (product search)
- MongoDB: Kore Tecnología (inventory)
- Casbin + JWT: Kore Tecnología (authZ/authn)

MACHINE-READABLE PROFILE (TEXT JSON)

```
{
  "name": "Ismael Hernández Santiago",
  "targetRoles": ["Backend Go Developer", "AI-Augmented Backend Engineer"],
  "remoteOnly": true,
  "location": "Mexico (Metropolitan Area)",
  "primarySkills": ["Go", "REST", "gRPC", "PostgreSQL", "Docker", "Kubernetes", "GCP"],
  "aiKeywords": ["LLM", "RAG", "agents", "embeddings", "prompt engineering"],
  "experienceSummary": "Production APIs, migrations, observability, and event-driven state handling."
}
```

WORK EXPERIENCE

Backend Golang Developer (Contractors: AccionLabs / Howdy.com) - Remote
07/2021 - 06/2026

- Improved customer service interface and supported planning sessions to design, estimate, and deliver tasks aligned with business objectives.
- Modified existing Go services: updated endpoints and processes to optimize report generation time using concurrency.
- Built new endpoints with both gRPC and REST protocols.
- Performed PostgreSQL database migrations and implemented Go CLI (Cobra) commands to run required data migration scripts.
- Promoted to the Foundations team: maintained services that directly interact with email sending and authentication APIs.
- Planned major refactorings to improve maintainability, simplify upgrades, and boost performance.
- Improved event-driven state handling by introducing Google Tasks for better reliability in the email-sending flow.
- Gained familiarity with third-party providers including Twilio, SendGrid, and Auth0.

Tech: Go, gRPC, REST, PostgreSQL, Docker, Kubernetes, GCP, Pub/Sub, Google Tasks, Auth0, Terraform, Git, Agile

Backend Golang Developer - TechBridgeIT

04/2019 - 07/2021

- Go REST services for medical appointments.
- Built dynamic forms microservice (Bigtable + PostgreSQL).
- Built APIs consuming forms service and handling business logic.
- Observability with Prometheus and Grafana; drove performance improvements.
- Promoted to Foundations: two services (People, Recall); GraphQL refactors; Spanner to PostgreSQL migration.
- Messaging stage: built Conveyor service; used concurrency patterns for message construction.

Tech: Go, REST, PostgreSQL, Docker, Kubernetes, GCP, Pub/Sub, Google Tasks, Bigtable, Spanner, GraphQL, Git, Agile

Full Stack Developer - Kore Tecnología

11/2016 - 03/2019

- Built ERP (Go server + AngularCLI client).
- Migrated MVC to REST API; introduced Docker + Docker Compose.
- Added MongoDB for inventory.
- Implemented authentication/authorization (JWT + Casbin).
- Implemented product search (Elasticsearch).

Tech: Go, REST, PostgreSQL, MongoDB, AngularCLI, Docker, Elasticsearch, Git, Agile
