PROFILE

Backend engineer (Go) with a strong track record building and improving production systems through clean APIs, concurrency, and pragmatic performance work.

I'm actively seeking remote roles and currently focus on personal AI projects to strengthen and consolidate my backend fundamentals with real AI potential.

CORE SKILLS

- Go / Golang
 - API Design: REST + gRPC
 - Concurrency & performance optimization
 - PostgreSQL (migrations, reporting, query tuning)
 - Docker & Kubernetes
 - GCP (Pub/Sub, Google Tasks)
 - Auth0, OAuth/JWT patterns
 - Terraform
 - Observability: Prometheus, Grafana
 - Data stores: Bigtable, Spanner, Elasticsearch, MongoDB
 - AuthZ: Casbin (role-based access)
 - GraphQL (API refactors)
 - Agile methodologies
 - Git
-

WORK EXPERIENCE

Backend Golang Developer (Contractors: AccionLabs / Howdy.com) - Remote

07/2021 - 06/2026

- Improved customer service interface and supported planning sessions to design, estimate, and deliver tasks aligned with business objectives.

- Modified existing Go services: updated endpoints and processes to optimize report generation time using concurrency.
- Built new endpoints with both gRPC and REST protocols.
- Performed PostgreSQL database migrations and implemented Go CLI (Cobra) commands to run required data migration scripts.
- Promoted to the Foundations team: maintained services that directly interact with email sending and authentication APIs.
- Planned major refactorings to improve maintainability, simplify upgrades, and boost performance.
- Improved event-driven state handling by introducing Google Tasks for better reliability in the email-sending flow.
- Gained familiarity with third-party providers including Twilio, SendGrid, and Auth0.

Tech: Go, gRPC, REST, PostgreSQL, Docker, Kubernetes, GCP, Pub/Sub, Google Tasks, Auth0, Terraform, Git, Agile

Backend Golang Developer - TechBridgeIT

04/2019 - 07/2021

- Built and maintained Go REST services for a medical appointments platform.
- Docs stage: created a Go microservice for dynamic forms.
 - Stored form instances/versions in Bigtable.
 - Stored form structure and parts in PostgreSQL.
- Services stage: created REST APIs that consumed the forms service and handled business logic such as smart reviews, surveys, and intakes.
- Added observability (metrics and alerts) using Prometheus and Grafana; used results to drive performance improvements.
- Performance work: introduced wait groups in selected cases and pool processors in others.
- Promoted to Mid Backend on the Foundations team.
 - Owned two Go REST services (People and Recall).
 - Led refactoring: migrated parts of foundations services to GraphQL.
 - Coordinated database migration from Spanner to PostgreSQL in multiple steps.
- Messaging stage: helped build a new Go REST API service (Conveyor).
 - Created endpoints and refactored processes.
 - Applied concurrency patterns to optimize message construction.

Tech: Go, REST, PostgreSQL, Docker, Kubernetes, GCP, Pub/Sub, Google Tasks, Bigtable, Spanner, GraphQL, Git, Agile

Full Stack Developer - Kore Tecnología

11/2016 - 03/2019

- Built an ERP system from scratch.
 - Server in Go.
 - Client using AngularCLI.
- Conducted POCs with different technologies to unblock implementation choices.
- Migrated from an MVC approach (Go) to a REST API approach.

- Introduced Docker and Docker Compose to simplify local/environment setup.
- Added MongoDB for product inventory control.
- Implemented authentication and authorization:
 - JWT token-based authentication.
 - Casbin-based access control model with roles tied to endpoint permissions.
- Implemented product search using Elasticsearch for more flexible queries.
- Owned modules and services (Users, Clients, Permissions, Administrations) built as Go microservices with REST and PostgreSQL.

Tech: Go, REST, PostgreSQL, MongoDB, AngularCLI, Docker, Elasticsearch, Git, Agile

Web Developer & Analyst Programmer - DSG & JV Asesores

06/2013 - 01/2015

- Developed and improved functionalities for a fiduciary system in Visual Basic.
- Participated in the migration of the system to the web using C#.

Tech: Visual Basic, .NET, C#, JavaScript, HTML, CSS, MySQL, SQLServer, Oracle, Git, Agile

EDUCATION

- National Polytechnic Institute (IPN): studied Physics & Mathematics (undergraduate coursework).
- Local university (Oaxaca): studied Philosophy & Economics (undergraduate coursework).
- Self-taught software engineer after discovering software development through building prototypes.

CERTIFICATIONS & COURSES (TO UPDATE)

- Add/refresh: Claude certification, Google certifications, AWS certifications.
- Courses/diplomas (e.g., Udemy) - placeholder for update.

SELECTED PUBLIC WORK

- Oh-My-PM (public) - <https://github.com/lsmahsantiago/oh-my-pm>
